github.com/zeyad-mohammed-dev

SUMMARY

Backend Developer and Computer Science student focused on Node.js and JavaScript (ES6+), with hands-on experience building server-side applications using Express.js. Experienced in RESTful API design, SQL/NoSQL databases, asynchronous programming, event-driven Node.js concepts, API security, Git/GitHub, Docker, and AWS. Strong problem-solving and debugging skills with practical project experience in authentication, authorization, and database-backed applications

EDUCATION

Higher Technological Institute, 10th of Ramadan City | Bachelor of Computer Science Expected Graduation: 2027
GPA: 3.62 / 4.00 | 4th Year Student

INTERNSHIP

Backend Web Development Trainee — Route Academy, Cairo, Egypt Jun 2025 – Dec 2025

- Developed server-side applications using Node.js and Express.js with MySQL and MongoDB for database-driven features.
- Designed and implemented RESTful APIs for database-backed applications, applying modular backend design and integration practices.
- Implemented authentication and authorization workflows with input validation and secure credential handling.
- Debugged backend and database integration issues while collaborating through Git/GitHub version control.

PROJECTS

NEW — Personal Habit & Goal Tracker Aug 2026

Developed a 9-module offline-first desktop application using Electron, Angular, Node.js, Express.js, and MongoDB, with RESTful APIs for habits, goals, 10-day cycles, and Pomodoro study tracking.

Tools: Electron, Angular, Node.js, Express.js, MongoDB, Joi | 3-layer architecture, JSON export/import, Electron IPC

GitHub: github.com/zeyad-mohammed-dev/NEW

Taghreed — Arabic RTL E-Commerce Platform Jul 2026

Developed 41 RESTful endpoints across 12 domains for a full-stack Arabic RTL e-commerce platform, covering product browsing, authentication, cart, checkout, orders, wishlist, reviews, and admin workflows.

Tools: Angular, Node.js, Express.js, MongoDB, Mongoose, JWT | 9 controllers, 7 schemas, 10 services, admin dashboard

GitHub: github.com/zeyad-mohammed-dev/taghreed-ecommerce

Washweshny — Anonymous Messaging Backend May 2026

Developed a secure anonymous messaging backend using Node.js and Express.js with JWT + OTP authentication, rate limiting, account management, protected APIs, and optional media uploads across 39 commits.

Tools: Node.js, Express.js, MongoDB, JWT, Joi, Cloudinary | centralized config, global error handling, asyncHandler, sendResponse

GitHub: github.com/zeyad-mohammed-dev/Washweshny-App

TECHNICAL SKILLS

Backend Development: Node.js, Express.js, NestJS, RESTful APIs, Repository Pattern

Programming: JavaScript (ES6+), TypeScript

Databases: MySQL, MongoDB, SQL, NoSQL, Sequelize, Mongoose

Architecture & Core Concepts: Asynchronous Programming, Event-Driven Architecture, Modular Backend Design

API Security: JSON Web Tokens (JWT), Refresh Tokens, One-Time Password (OTP) Verification, Bcrypt, Rate Limiting, CORS

Version Control: Git, GitHub

Cloud & Containers: Amazon Web Services (AWS), AWS S3, Docker

Problem Solving: Debugging, Troubleshooting, API Integration

CORE STRENGTHS

Problem Solving • Debugging • Communication • Team Collaboration • Adaptability • Continuous Learning

LANGUAGES

Arabic: Native | English: Proficient
